Architect

FIVE PACK

Overview

With a history in the industry spanning more than nine years, they possess a distinct blend of skills, experience, and leadership capabilities that make them a strategic asset to every team they partner with. Their work ethic and natural orientation to learn, adapt, and innovate expedited their transition from a junior iOS developer to an architect, and fueled them to pick-up Flutter upon its release in 2017. Through the years, they've carved out a unique expertise in serving faith-based non-profits through their work with clients like MultiTracks and Newman Connect. Their exposure to building products from the ground up, both personally and professionally, while working with product owners and C-Suite executives has helped them excel at estimating, leading teams, and executing business goals.

Skills

- Flutter
- Swift & Swift UI
- Objective C
- Mapbox
